

Present: Alexei, Flemming, Gene, Tonko, Tommy, Prashanth, Yuri, Jim, and myself

== Hardware

- Switched to nitrogen flow in TPC
- preparing to regen oxygen and water scrubber
- preparing high-resolution CCD cameras for 3D sensors
- east pole tip is already open (west, not yet)
- waiting on high radiation level to normalize before work on west side
- would be interesting to see actual readings in areas of hall
- question about spare sector modules in clean room (dispose of them?)
- Tonko mentions west side is now powered up
  - also sector 24 FEEs (inner and outer) may come up and down as Tonko is working
  - mentioning for information only so there is no surprise if power comes up and down

== Software

- Yunshan working on pp500 space charge for this year
  - will be uploaded today or tomorrow
  - starting point for next phase of calibration
- Shorted ring location (IWFC) needs to be localized before start of that phase
- Also need T0 nailed finalized
- Alexei will also try again to find the short on the hardware itself
- 7.7 GeV dE/dx still in progress
- Yue-hang will work on fixed target 3.85 GeV space charge
  - hope to start next week

== AOB

- Flemming has most material needed for talk next week
  - will send around tomorrow for comments
