

# W AL Updates

Devika Gunarathne/ Amani Kraishan

## Key Points

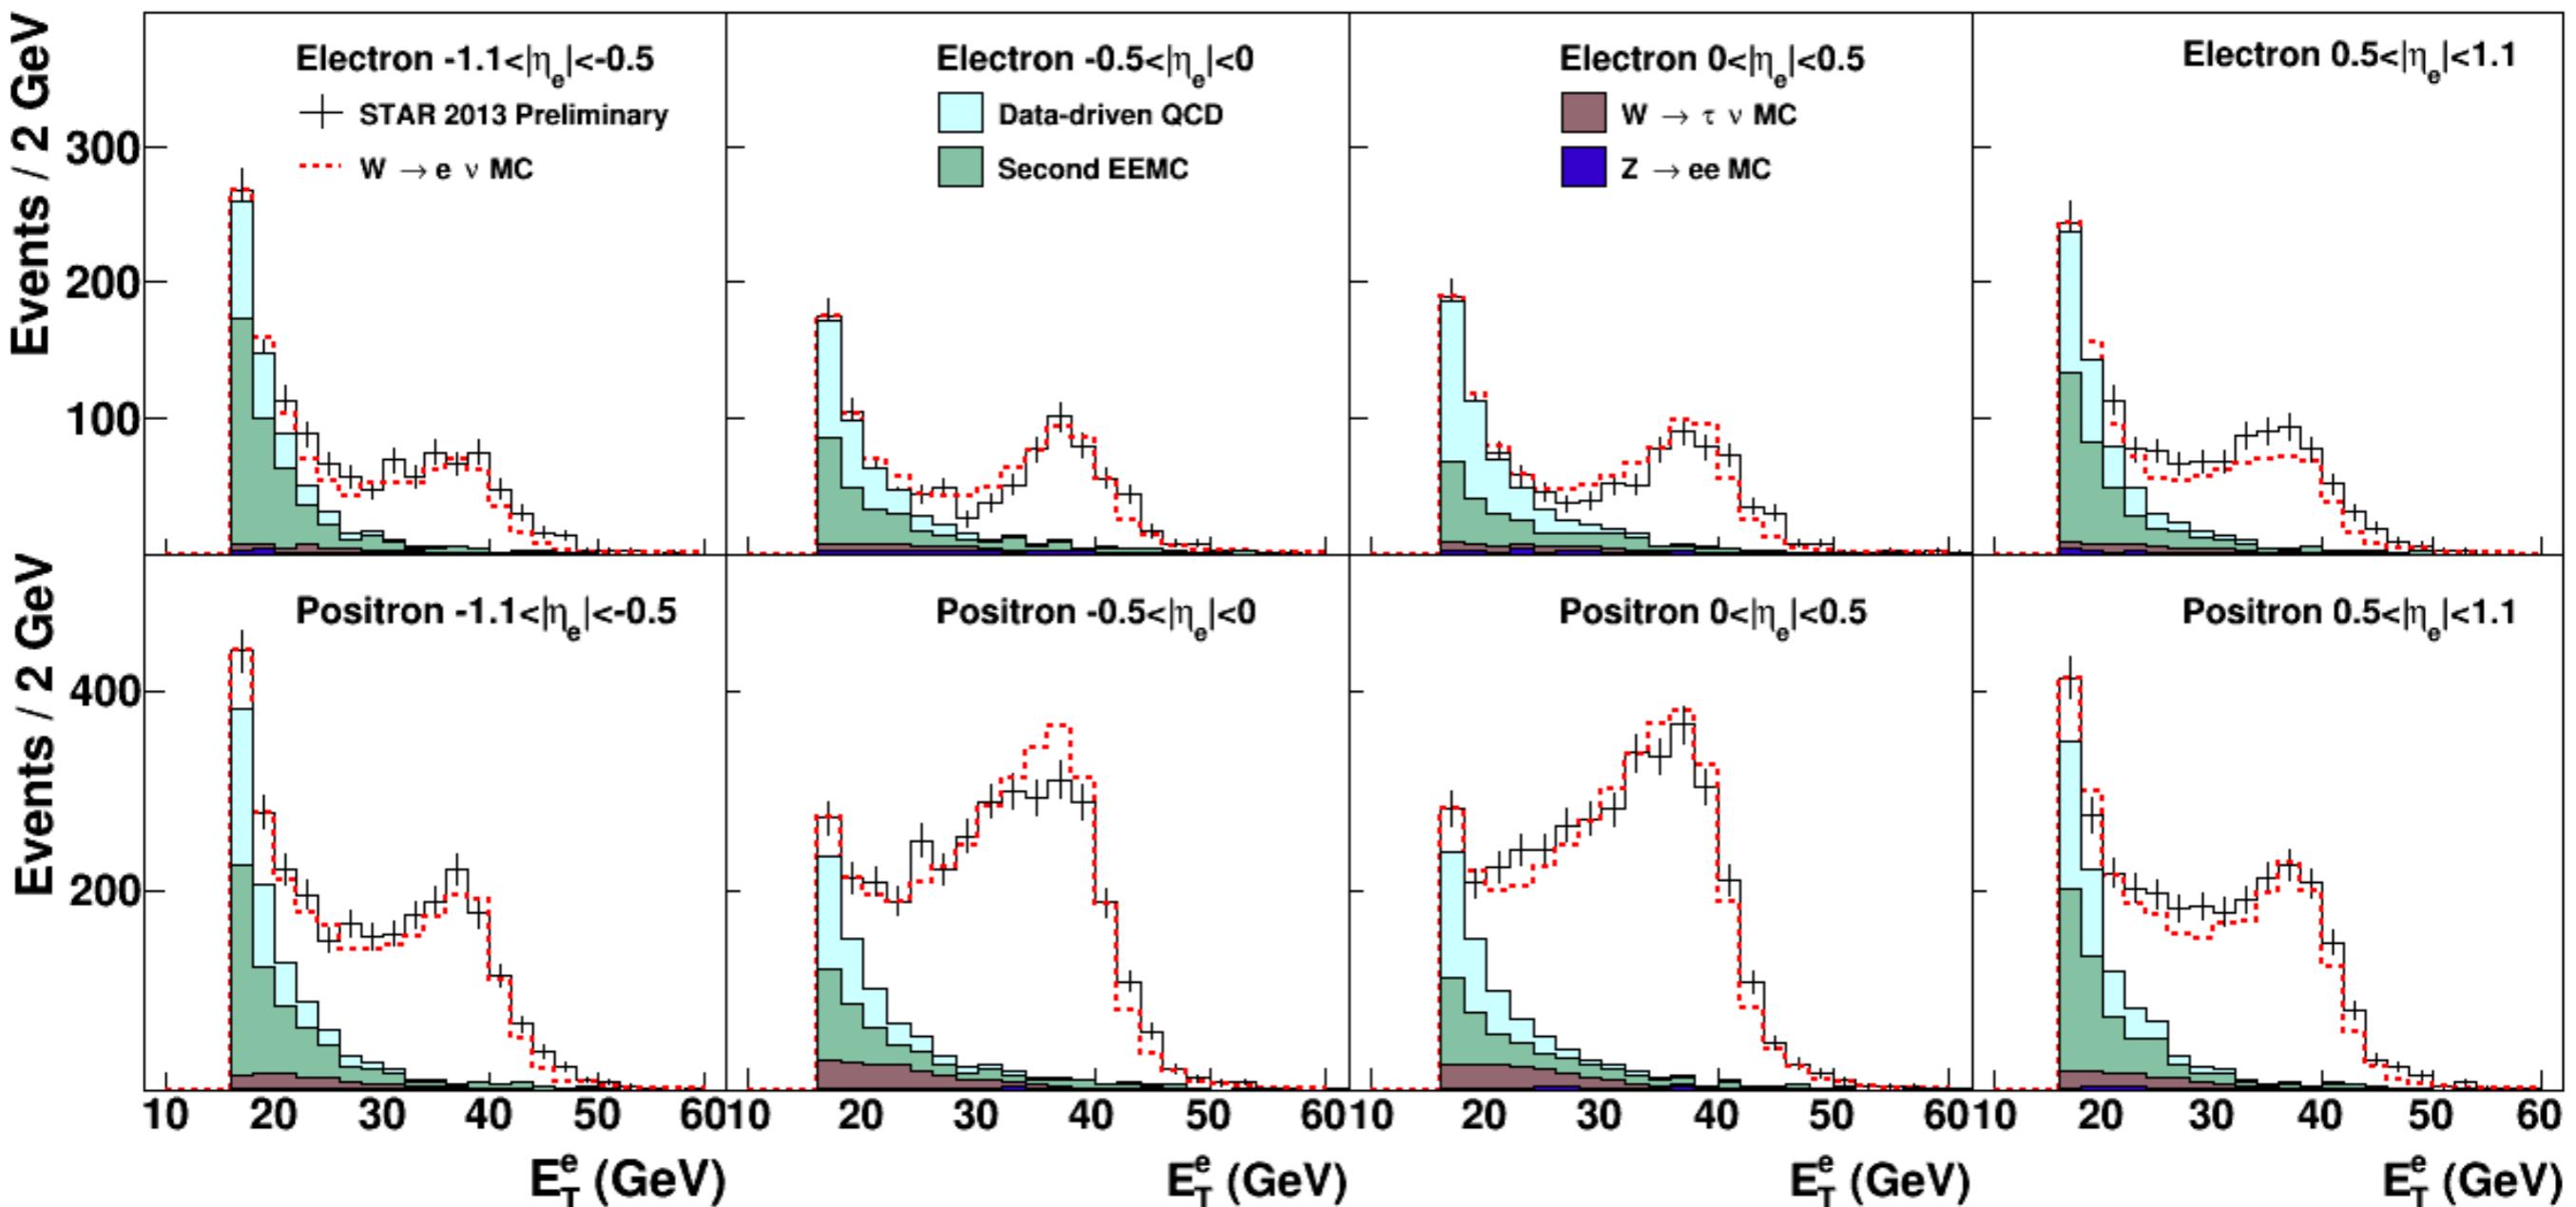

- New Cuts provide 10% better precision for W AL than preliminary cuts.
- The level of agreement between data and MC with new cuts is consistent with that of with preliminary cuts.
- The results with new cuts (central values of AL for both W+ and W-) are consistent and within the statistical uncertainty of that of with preliminary cuts.
- Systematics are calculated. [EMC systematic with data are consistent with that of preliminary]. For mid-rapidity analysis, EMC systematics using theory are bigger (for W+) than that of using data, therefore mid-rapidity AL systematic in the final results will be bigger than that of in the preliminary results if the suggested theory method to be used to calculate EMC systematics.

# New Cuts vs Preliminary Cuts

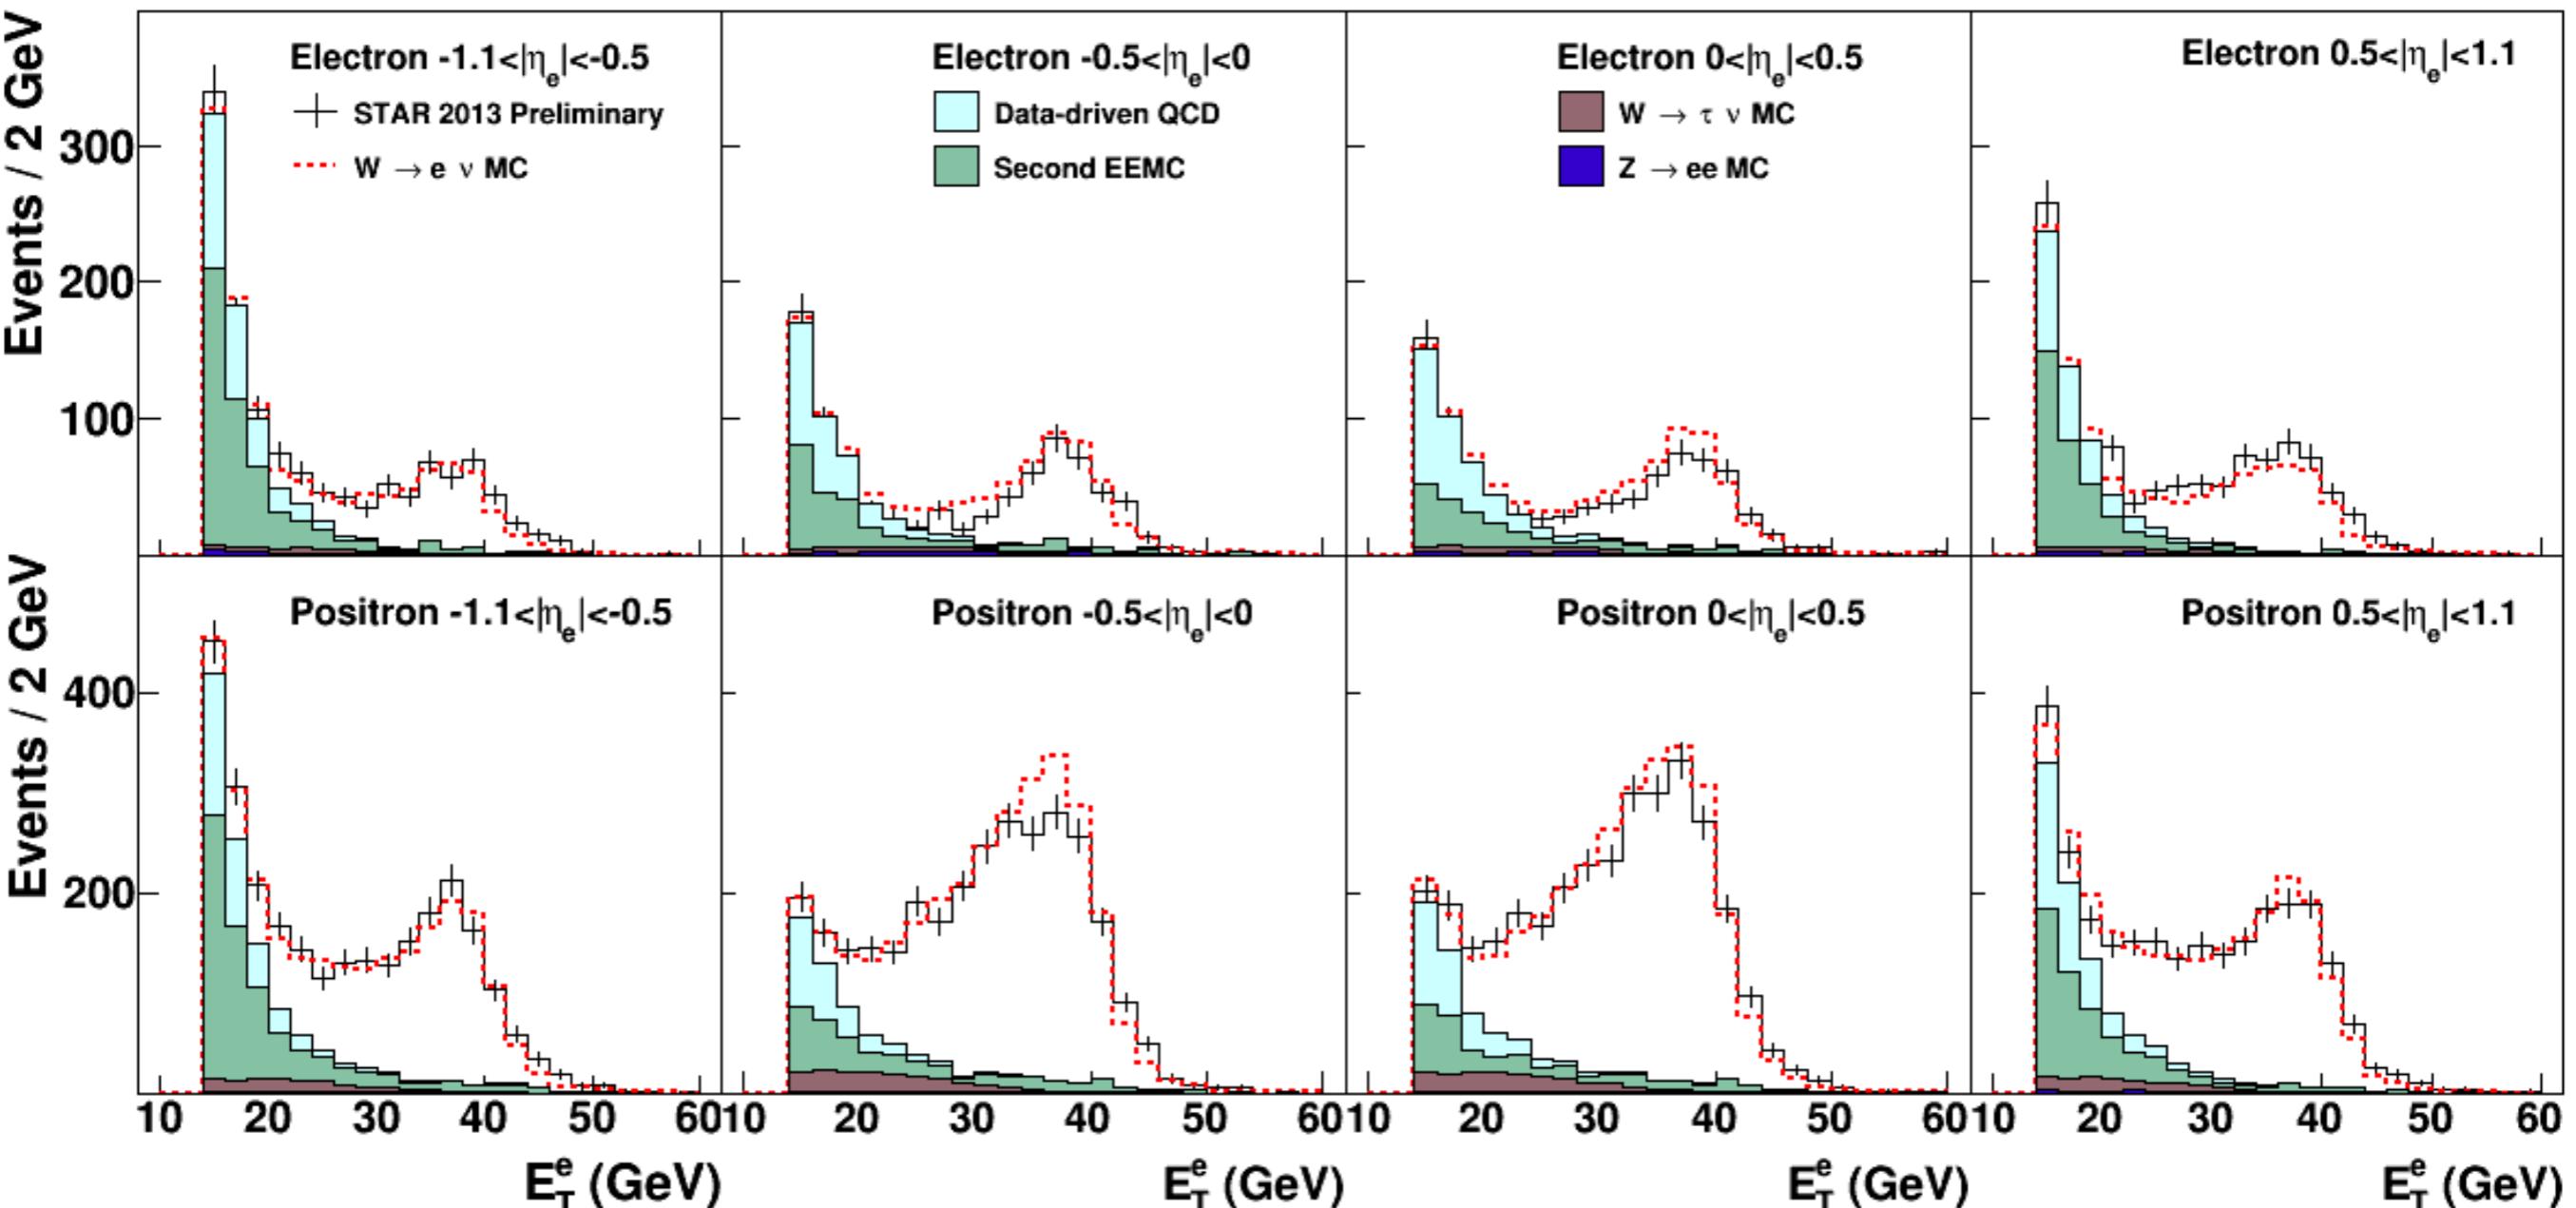

Cut	Preliminary	New cut Period 1	New cut Period 2
2x2 ET	14	16	16
2x2 ET / 4x4 ET	0.95	0.96	0.96
2x2 / near Cone	0.88	0.82	0.82
signPT	14	16	16
away ET	11	11	100

## Questions / comments

- Why the central values of forward and backward endcap bins in Jinlong's results change more than 1 sigma than Amani's results or preliminary results ?
- Is the calculating EMC systematics using W AL theory for mid-rapidity bins (which increased the systematics than preliminary results for W+) the most effective way?
- The cross check between devika's and Jinlong's mid-rapidity results tells that they are not consistent with each other. We use same data and embedding. So this need an investigation. Final results that agrees between independent analysis should obtain.

# Backup

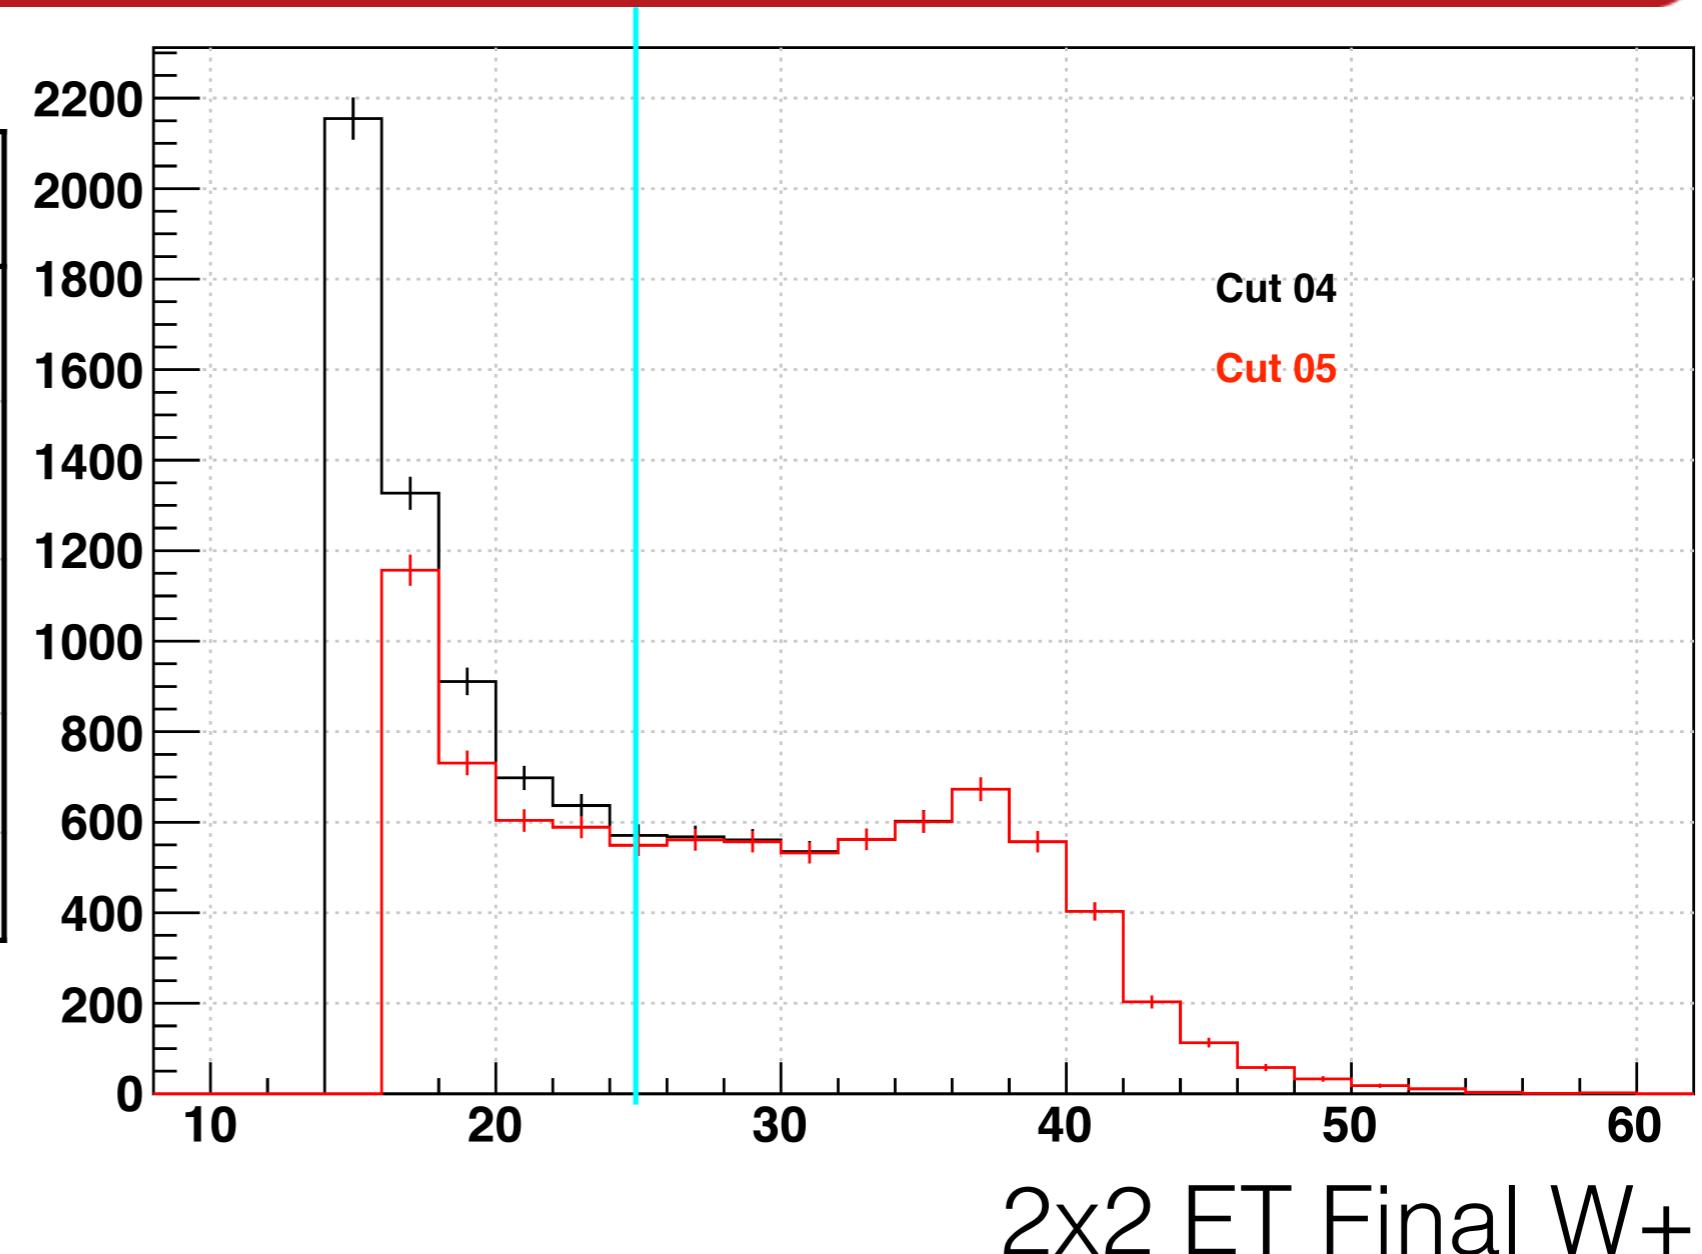

# Impact of 2x2 / Near Cone cut

- Sign Pt Cut Vs 2x2 / nearCone cut - MC

# Cuts-Optimization - Impact of signPt cut

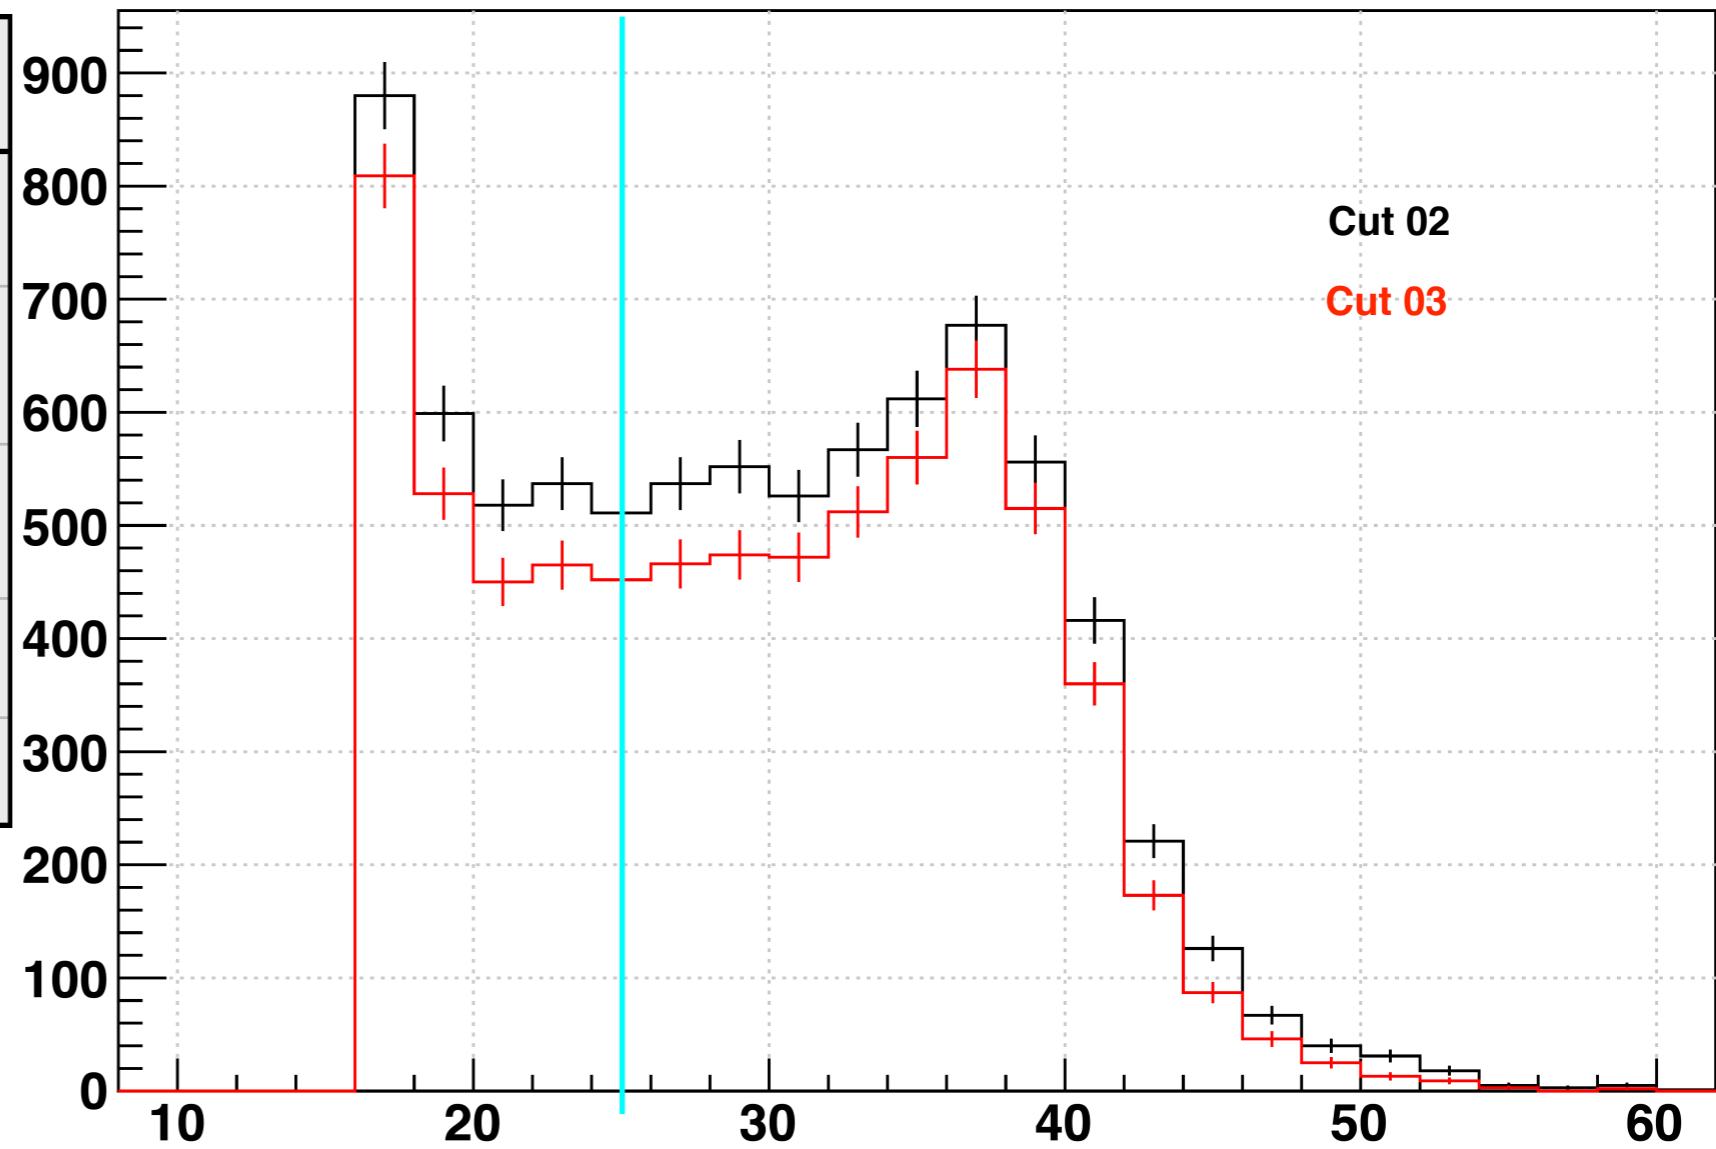

Cut	Cut 04	Cut 05
2x2 ET	14 GeV	16 GeV
2x2 ET / 4x4 ET	0.95	0.95
2x2 / near Cone	0.75	0.75
signPT	<b>14 GeV</b>	<b>16 GeV</b>
away ET	20 GeV	20 GeV

- Remove large QCD BG at low ET. Does not impact the signal region.

# Cuts-Optimization - Impact of change in away ET cut

Cut	Cut 02	Cut 03
2x2 ET	16 GeV	16 GeV
2x2 ET / 4x4 ET	0.95	0.95
2x2 / near Cone	0.80	0.80
signPT	16 GeV	16 GeV
away ET	<b>100 GeV</b>	<b>11 GeV</b>

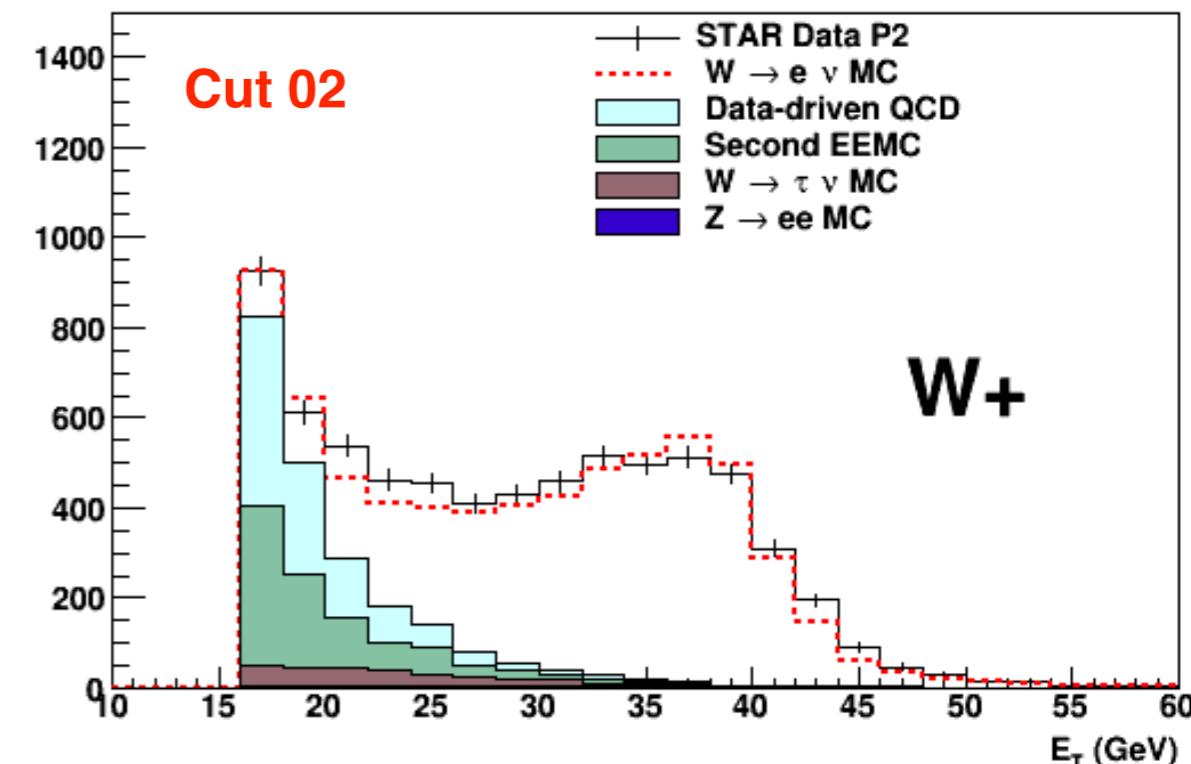

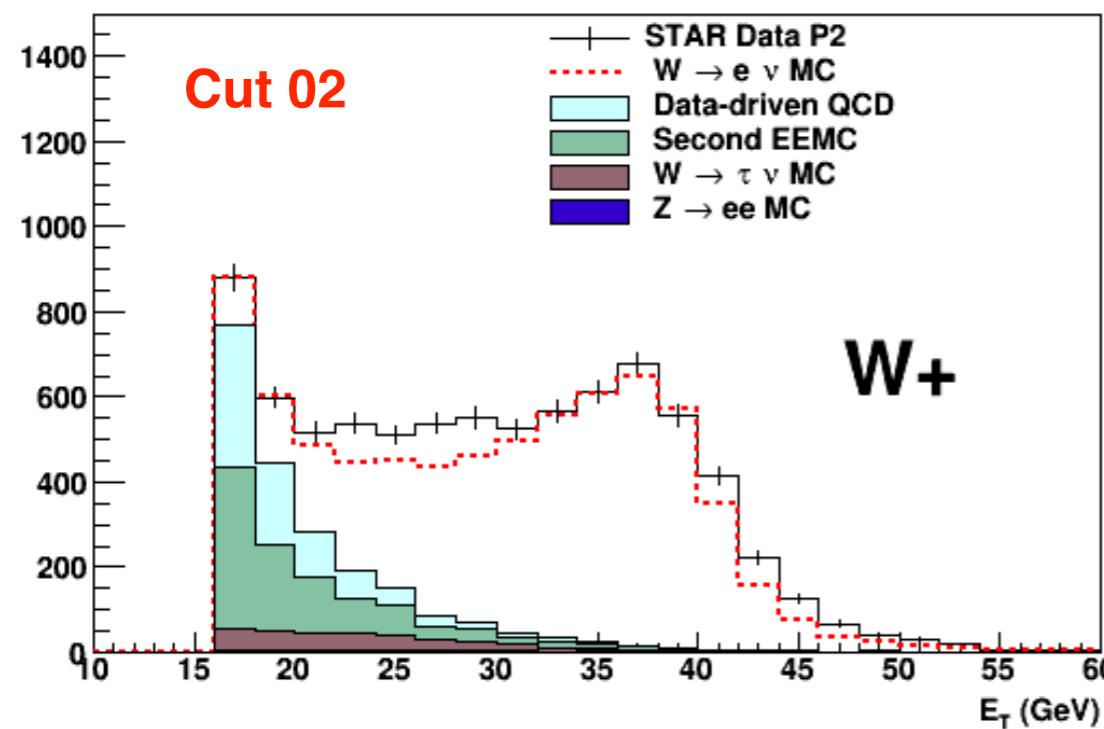

2x2 ET Final W+

# Cuts-Optimization - away ET cut - period 2 ?

Period 1

Preliminary	<b>Cut 02</b>
14	16 GeV
0.95	0.95
0.88	0.80
14	16 GeV
11	100 GeV

Period 2

- There is no a significant “bump” pronounced in Period 2 similar to Period 1
- We do not need to use away ET cut for period 2.

# New cuts - Yields / BG Statistics- Period 1
